The ZmWADS2 protein (AAB73333) is expressed particularly in mature pollen after dehiscence, indicating
                                       The present invention provides the protein and coding sequences of the dea mays ZmWADS2 protein, which is specifically expressed in pollen. The sequences can be used to produce male Sterile plants, as ZmWADS2 is essential for pollen tube growth. These are useful in hybrid breeding, particularly of corn, cereal and grain. The present sequence is the

                                            their use in the generation of transgenic plants. The ZmWADS2 regulatory sequences are useful for cloning and expressing a pollen-specific or pollen-abundant gene in a plant, and may also be used to drive the expression of a gene of interest in a pollen-specific or pollen-preferred manner. The ZmWADS2 regulatory sequences are useful for isolating related regulatory sequences are useful for isolating related specificity to genes of other plant species which confer pollen or group sequences are useful in plant breeding, especially for the production of hybrid seed. In particular, they may be used to drive the production of hybrid seed. In particular, they may be used to drive the pollen-specific expression of heterologous genes which confer nuclear or cytoplasmic male
that it has an essential role in pollen development and function, in particular in pollen tube growth. The invention also relates to vectors and host cells comprising the ZmMADS2 regulatory or genomic sequence, an

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 /SIDSI/gcgdata/geneseq/geneseqp-embl/AA1983.DAT:*

                                                                                                                                                                                                                                                                                                   The present sequence is that of the novel PTAG-2 protein of poplar (Populus balsamifera subsp. trichocarpa), as deduced from newly is closed gene and cDNA sequences (see AAZ57948-49). PTAG-2 is 1 cof 4 novel floral homeotic genes identified in this poplar species. It is a homologue of AGAMOUS and is expressed in floral tissues. PTAG-2 contains a MADS domain and a K-domain. The invention provides nucleic acid sequences of the 4 novel Populus genes, the corresponding cDNA sequences (see AAZ47942-49) and deduced amino acid sequences (see AAY58454-57). It also provides methods of using the corresponding cDNA sequences of the 4 novel Populus genes and cDNA sequences to produce genetically engineered Populus and other trees having modified fertility characteristics, including sterility. Genetic constructs useful in producing genetically centineered Populus and other trees include antisense versions of CPTAG-2, dominant negative mutants, and constructs useful for sense suppression. Sterile trees allow increased wood yield and a creduction in the production of allergens such as pollen.

                                                                                                 Best
                                                                                                                                                                             The present sequence represents a floral homeotic protein, designated pryAG-2, which is derived from Populus balsamifera subsp. trichocarpa. The specification also describes PTD, PTLF, and PTAG-1 proteins. The floral homeotic proteins are expressed in floral tissues. PTLF is a homologue of LEAFY (LFY) and FLORICAULA (FLO), and is expressed in immature inflorescences on which floral primordia are developing. PTD is a homologue of DEFICIENS (DEF), and is strongly expressed in stame primordia from the onset of organogenesis. PTAG-1 and PTAG-2 are homologues of AGAMOUS (AG). The floral homeotic proteins and polynucleotides are useful for producing transgenic plants having modified fertility characteristics, particularly sterility.

(Populus balasmifera subsp. trichocarpa), as deduced from newly constant gene and cDNA sequences (see AAZ57946-47). PTAG-1 is 1 cof 4 novel floral homeotic genes identified in this poplar species. It is a homologue of AGAMOUS and is expressed in floral tissues. C PTAG-1 contains a MADS domain and a K-domain. The invention provides nucleic acid sequences of the 4 novel Populus genes, the c corresponding cDNA sequences (see AAZ47942-49) and deduced amino acid sequences (see AAZ47942-49) and deduced amino acid c sequences to produce genetically engineered Populus and other trees include antisense versions of c sterility. Genetic constructs useful in producing genetically c engineered Populus and other trees include antisense versions of c PTAG-1, dominant negative mutants, and constructs useful for sense c suppression. Sterile trees allow increased wood yield and a constructs useful in the production of allergens such as pollen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RESULT
